Graphic Design

Banners, overlays, templates, mailouts, fliers, web graphics, logos you name it! At every job I've had, as well as in my personal work, graphic design has been used to create just about anything!

Web Design

I've designed and launched three different websites for different applications (eCommerce, Community Hub, and Portfolio)! Each site presented it's own unique challenges, but I'm proud of the solutions I crafted and the results!

Animation

Animation has been my newest passion project this year. I've been massively improving in all aspects, from design to interpolation! I've recently been creating spinning logos, procedural environments and 2D animations!

Photography

My current job at Rentable requires a significant amount of photography. I consistently do 3D Tour photography as well as traditional photography for apartments. Most recently I've ventured into drone photography!

Photo Editing

Due to my time spent doing photography, I've naturally built up great skills with photo editing. Touch ups, cropping, scaling, reformatting for print or web, you name it I've done it! After graphics, I consider photo editing to be next best skill!

Streaming

I do video game streaming for personal use in addition to streaming for local gaming tournaments! Because of this I have hundreds of hours of experience in producing assets, managing cameras, audios scenes and more!

Videography

I've created many promotional videos as well as apartment tour videos! At Rentable I created "apartment stories" that allowed the viewer to tour through apartments in the same way someone would look through a SnapChat story for a quicker viewing experience!

Video Editing

Most of the time I've been responsible for processing the film I capture. I've done the compiling, trimming, editing and publishing for all the apartment film I've shot! I also have experience during personal projects editing both stock footage and homemade clips into intriguing videos!

Portfolio
